Third Linear Collider Physics School 2009 - LCPS2009

August 17 - 23 2009

Ambleside, UK

*Speaker.

Questions for Student Discussion

David Miller

Please quiz the lecturers informally to help you answer these questions by the end of the week (Friday 21 August at 16.30).

1. What does the LHC have to discover before 2010 to justify building ILC **or** CLIC?
2. Will ILD or SiD be suitable for the physics goals of **both** ILC and CLIC?
3. Can parts of the ILC be used to build the drive-beam for CLIC?
4. Please be prepared to volunteer to stand up at the final discussion session and give the answers to these questions, and be ready to explain them.
5. I have 5 copies of "Linear Collider Physics in the New Millennium" which can be lent to students one by one, if you ask me, and promise to return them.
