

Dear reviewers,

Due to the last correction(4) I had to change a little bit the structure of the proceeding to be included in 4 pages. In particular I removed the figure 2 and I changed the two lists on normal text, trying not to delete any part of the text. Below a short explain of the corrections:

1. I changed the “neutrino mass” with “effective  $\nu_e$  mass” as suggest and eliminated the reference to “model dependent”.
2. I added in the conclusions a very short quote of expected sensitivity of Holmes with 32 pixels (few months initial phase) and the full sample (three years project aim).
3. I removed the picture 2 and enlarged 1 and 3.
4. I switched the introduction of the proceeding with the abstract and I changed minor things.

Thank you

Best regards

Giovanni Gallucci
